**FLEXPASS**<sup>™</sup>

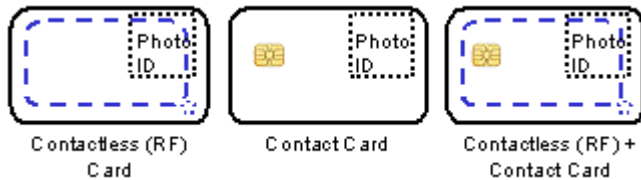

# SPHINX LOGON MANAGER

The **Sphinx Logon Manager** software solution securely stores user names, passwords and credit card account information. Now users can logon to Windows, networks, websites, applications and complete web purchases by simply using the Sphinx Logon Manager software with a smart card or contactless ID card.

The Sphinx software can be used by itself, or with a building access application. Corporate users can use their photo identification building access cards from Indala FlexPass range to securely access their network. Electronic Development Sales works with the worlds best to bring multi-functional card solutions to customers in Australia and New Zealand.

Sphinx Logon Manager and CardMaker can be used with the following card types:

Sphinx Logon Manager installs on a PC and can be used without a card management system. If you want to be able to issue cards to employees, re-set card PINs, and print reports, then **Sphinx CardMaker** should be used to provide this complete card management system.

Sphinx Logon Manager securely stores user names, passwords and personal data such as credit card account information. To logon to Windows NT, 2000 or XP, a user simply inserts a smart card into a smart card reader (or passes an ID card over an RF proximity reader) and enters the card PIN. Thereafter, open the Sphinx window to navigate to a web site, application or complete a credit card purchase. Use Sphinx to facilitate logon or transfer information to entry fields.

The **Sphinx CardMaker** is an optional card management system for Sphinx Logon Manager installations that makes it easy to issue Sphinx cards, re-set card PINs, and print reports.

CardMaker is completely scalable to your needs. If you just need to use CardMaker occasionally for a small installation it's easy to use, because the functionality is straight forward and intuitive. CardMaker includes capabilities that makes it ideal as a complete card management, central clearing house, and reporting system for large multi-application customers.

EDS also have available the latest smart card readers to interface into the PC logon manager...

**ChipDrive extern 330**

Towitoko desktop smart card reader with USB connector cable.

**SCR 201**

SCM smart card reader (PCMCIA).

**ChipDrive micro 100**

Towitoko smart card reader with serial cable with PS/2 or a DIN5 keyboard port connector.
